

SAFETY & COMPLIANCE SUMMARY

Fiscal years 2022 – 2024

Prepared by Tanya Beaulieu, Safety & Compliance Manager — November 2025

1. Carrier credentials

National Safety Code (BC)	NSC BC 20-487-316 — Safety Certificate, rating: Satisfactory
US operating authority	USDOT 9318842; occasional Washington State lanes (bonded carrier, 22 FAST-card drivers)
Port access	Port of Vancouver Truck Licensing System licence — 14 drayage units tagged
Food safety	BRCGS Storage & Distribution certification, Grade A (audits Jun 2023, Jun 2024, Jun 2025); Safe Food for Canadians licence for storage and handling
Other programs	Partners in Protection (CBSA) member since 2016; SmartWay Transport Partner; WorkSafeBC Certificate of Recognition (COR) since 2019
Safety systems	Electronic logging devices and forward/driver-facing AI dash cameras in 100% of tractors (Samsara); speed limiters set at 105 km/h; roll-stability control on all tractors 2017+; reefer temperature telematics on all 46 reefer trailers

2. CVSA roadside inspections

Year	Inspections	Out-of-service (OOS)	Driver OOS	Vehicle OOS	OOS rate	Km travelled
2022	58	9	3	6	15.5%	8,420,000
2023	71	12	5	7	16.9%	8,610,000
2024	64	6	1	5	9.4%	8,930,000

For reference, roadside out-of-service rates for Canadian truck inspections have historically run around 20% for vehicles; the Company's rate has been well below that in each year. The 2023 increase in driver OOS relates to hours-of-service log errors during the transition to electronic logging (see Section 4).

3. Collisions

Year	Reportable collisions	Preventable	Preventable per million km	Injuries	Fatalities
2022	4	2	0.24	0	0
2023	5	2	0.23	1 (minor)	0
2024	3	1	0.11	0	0

4. NSC profile and contraventions

Year	Contraventions (convictions)	Profile status at year end
2022	11	Satisfactory — below monitoring threshold
2023	17	Satisfactory (after compliance review, June 2023)
2024	7	Satisfactory — below monitoring threshold

Q1 2023 NSC warning letter (contraventions score above the warning threshold, driven by hours-of-service log errors during the move to electronic logging). Facility compliance review completed June 2023 — result: Satisfactory. Profile back below threshold by Q4 2023.

Corrective actions taken in 2023: ELD refresher training for all drivers (100% completion), weekly log audits by the safety department, a two-strike coaching policy, and dispatch planning rules that block assignments which would exceed available hours.

5. Workplace safety (WorkSafeBC)

Year	Time-loss claims	Main causes
2022	6	Strains during manual unloading (3), slips on trailer steps (2), forklift contact (1)
2023	7	Strains (4), slips/falls (2), minor collision injury (1)
2024	4	Strains (2), slip on ice in yard (1), forklift contact (1)

Experience rating: the Company's WorkSafeBC experience-rating adjustment for 2025 is a 9% discount off the base rate for its classification unit. COR audit results: 89% (2023), 91% (2025).

6. Driver programs

- Entry-level: all new Class 1 drivers complete a 3-week in-house onboarding with a driver trainer, in addition to provincial MELT requirements.
- Annual: winter-driving and chain-up certification (October), TDG refresher, reefer pre-trip and temperature-log training for reefer drivers.
- Safe-driving bonus: \$0.02/km quarterly for zero preventable incidents and clean inspections; paid to 81 of 96 drivers in Q4 2024.
- Camera-based coaching: harsh-event and distraction alerts reviewed weekly; 2024 coaching sessions: 412.

7. Open items

- No outstanding NSC audits, show-cause hearings or safety-related orders.
- One cargo claim open at November 2025 (reefer temperature excursion, \$38,400; insurer has accepted coverage subject to the deductible of \$10,000).
